

Revolutionizing Healthcare Communication with Digital Signage

Digital signage is transforming how hospitals and healthcare facilities share information, enhancing the experience and well-being of patients, visitors, and staff.

From hospitals and clinics to long-term care facilities, real-time messaging ensures that critical updates, announcements, and health information reach the right people at the right time. A centralized system seamlessly manages multiple displays and communication channels, delivering targeted content facility-wide or within specific departments.

By modernizing information distribution, digital signage improves operational efficiency, reduces wait-time anxiety, and creates a more connected and informed healthcare environment.

Up-to-the-minute health and safety information:

- Public and private facing screens alert patients, visitors and staff of coded emergency situations.
Keep patients, visitors and staff informed of current facility procedures and restrictions.
- Patient room status monitors automatically updated by the electronic medical records system inform visitors and staff of patient status prior to entering patient room.
- Way-finding and directory displays assist and calm visitors and reduce staff interruption.
Employee facing screens keep staff informed and engaged with latest facility updates.
- Waiting room displays with live video pass through and wraparound content keep visitors informed and entertained, reducing perceived wait times.
- Large scale donor recognition boards celebrate key contributors and promote current campaigns.
