

Real-Time Updates and Improved Communication for Multiple Dwelling Units

Digital signage serves as a highly effective communication tool within a multiple dwelling unit (MDU). By installing displays in high-traffic areas like the lobby, property managers can efficiently convey timely and relevant information to residents, visitors, and staff.

Unlike traditional bulletin boards, digital displays can instantly share updates, building news, event schedules, and emergency alerts in real time. This ensures that important information is always visible and accessible, improving communication and reducing the likelihood of missed messages.

These screens can operate as stand-alone units or as part of a larger network spanning the facility or multiple properties. With centrally managed content, property-wide announcements can be easily shared across the network, while location-specific information can be displayed on individual screens, ensuring relevant updates are seen by the right people at the right time.

Keeping residents, visitors, and staff informed:

- Emergency alerts and evacuation procedures
- Up-to-date facility health & safety guidelines
- Maintenance schedules and service disruptions
- Building rules and regulations reminders
- Emergency contact information and building security updates
- Amenity and elevator booking information
- Package delivery notifications and pick-up instructions
- Visitor check-in and guest registration information
- Parking availability and updates
- Resident surveys and feedback requests
- Resident announcements and community notices
- Automated news and local weather feeds
- Property staff bios and photos
