Streamline Meeting Room Management with Real-Time Displays and Seamless Integration

Companies of all sizes need fast, reliable solutions for booking and managing meeting rooms scattered across a location. Our digital meeting room solution provides real-time confirmation of room availability throughout your facility. Easily integrated with existing Google Calendar or Outlook accounts, our solution requires minimal training and no proprietary software, making it simple and intuitive for your team to manage bookings and updates.

Individual room displays show room-specific bookings, while optional large-format screens provide a venue-wide summary of all meeting activity. Large displays are networked with smaller room displays, allowing you to easily monitor both individual room schedules and overall facility usage — keeping your organization organized, informed, and running efficiently.

In addition to current and upcoming room status, the displays can showcase corporate branding, messaging, live data feeds, and more. Choose from a curated library of layouts and designs or request a custom look tailored to match your organization's style and needs.

More than a simple schedule screen:

Individual room information can be shared across a network of displays throughout the facility

- Works with a variety of players and displays including Windows, Android and System on Chip (SOC) solutions
- Access schedules and book rooms using mobile devices
- Override previously scheduled content with alerts during an emergency

Default content can be automatically displayed when no events are scheduled

- Current room status can be triggered to display using sensor/camera detection
