Critical Information Displays: Supporting Safer Spaces with Real-Time Room Visibility

Room Status Monitors provide immediate, real-time visibility into the status of rooms that are otherwise out of public view. They deliver essential information to staff, residents, and visitors, indicating occupancy and any necessary safety precautions.

Using compact displays, these monitors are designed for easy installation beside doorways, ensuring critical updates are always within sight.

Ideal for use in hospitals, research facilities, long-term care homes, and other environments where clear, actionable communication is vital.

Enhanced Safety Communication: Displays critical alerts and recommended precautions before entry.

Icons for Quick Recognition: Uses clear visual indicators to highlight potential dangers and safety precautions.

Supports System Integration: Pulls real-time data from booking calendars, room management systems, and electronic medical records to automate updates.

Broadcast Emergency Alerts: Instantly push real-time emergency messages via existing facility systems or physical triggers.

Emergency Override Functionality: Prioritize critical alerts instantly, overriding regular content if needed.

Compliance Support: Assists in meeting regulatory, infection control, and health and safety standards.

Visitor Guidance: Helps guests easily navigate rooms and protocols without needing direct staff assistance.

Streamlined Workflows: Reduces communication gaps and improves operational efficiency across teams.
