

Streamline Communication for First Responders with Audience™ Digital Signage

First Responders have unique communication needs in the workplace. Staff movement, rotating schedules and shifting responsibilities make the distribution of information a challenge.

A centrally managed digital signage network provides a practical solution. With a coordinated digital signage strategy, individual departments can display location specific information within their facility while also receiving important network wide messaging sent from a centrally managed source, ensuring timely and consistent communication.

Audience™ digital signage communication solutions deliver critical, real-time information where it's needed most - whether in dispatch centers, ambulance bays, or station common areas. EMS teams can use Audience™ to instantly share duty rosters, vehicle status updates, road closures, outbreak alerts, training reminders, and more:

Keep Teams Informed with Dynamic, Targeted Content:

- Real-time emergency alerts
- Important safety bulletins or announcements
- Scheduled meetings and meeting minutes
- Statistics Reports - call volume, training goals, general First Responder stats
- Municipal, department and committee news
- Short and long-term strategic initiatives and progress
- Relevant automated 3rd party newsfeeds
- Automated Weather Conditions - current and extended
- Location and status of apparatus in respective locations
- Employee and team recognition
- Messaging to promote health and wellness in the workplace
- Welcome messages for guests/visitors

ROAD CLOSURES

West Park Street Bridge
Between McTab St and William St will be undergoing rehabilitation repairs from May 27th until further notice.

Paisley - Mill Drive
Mill Drive will be closed between Queen St E and Rowe Street daily from 7am to 5:30 pm for work being completed at the Paisley Inn property. The road will be reopened to traffic each evening.
